SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

INTERNSHIP REPORT

ON

PYTHON PROGRAMMING AND QUIZ GAME

Submitted in partial fulfilment of the requirement of the degree of
**BACHELOR OF TECHNOLOGY IN COMPUTER SCIENCE AND
ENGINEERING**

Submitted To

School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

Submitted By

ADITYA AGARWAL

Roll No.: 2410030649

B.Tech CSE | Batch 2024–2028 | 5th Semester

Internship Domain: Python

Internship Duration: 04 August 2026 – 02 September 2026

Academic Session: 2026–27

1. CANDIDATE'S DECLARATION

I, ADITYA AGARWAL, Roll No. 2410030649, hereby declare that the internship report titled “Python Programming and Quiz Game” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering.

I confirm that the work presented in this report is based on my internship learning, practical activities, and project work during the Free Summer Internship in Python – 2026. The report has been prepared for academic submission, and the references used have been acknowledged appropriately.

I further declare that this report has not been submitted to any other institute for the fulfilment of any degree or diploma requirement. I shall be responsible for any copyright or academic integrity issues arising from the material submitted in this report.

Student Name: ADITYA AGARWAL

Roll No.: 2410030649

2. ACKNOWLEDGEMENT

I take this opportunity to express my sincere gratitude to everyone who supported and guided me throughout my internship. The internship provided me with an opportunity to strengthen my Python fundamentals and understand how programming concepts can be applied to develop a complete working application.

I am thankful to upSkillCampus and the organizations associated with the internship program for providing structured learning, hands-on training, and practical exposure in the domain of Python. The completion certificate identifies UniConverge Technologies and the All India Council for Technical Education (AICTE) in connection with the program, and acknowledges the internship period from 04 August 2026 to 02 September 2026.

I am also grateful to my university, IILM University, Greater Noida, and the School of Computer Science and Engineering for providing the academic platform and encouragement required to undertake this internship.

Finally, I express my heartfelt gratitude to my parents for their continuous support, encouragement, and blessings throughout this learning experience.

Student Name: ADITYA AGARWAL

Roll No.: 2410030649

3. INTERNSHIP COMPLETION CERTIFICATE

A copy of the internship completion certificate is attached below. The certificate records successful completion of the internship program in the Python domain from 04 August 2026 to 02 September 2026 and carries Certificate ID USC704178TIA.

4. PROJECT DESCRIPTION

4.1 Introduction

The internship was a Free Summer Internship in Python – 2026 conducted over four weeks from 04 August 2026 to 02 September 2026. The learning journey focused on Python fundamentals, conditional logic, practical programming, introductory exposure to Python libraries, and development of a small console-based application.

The project selected for practical implementation was a Quiz Game. The purpose of the project was to move from individual Python concepts to a complete working program. The application organizes multiple-choice questions, displays options, accepts user input, checks answers, calculates the score and percentage, and provides performance feedback.

The internship therefore combined learning and application. Concepts such as lists, dictionaries, loops, user input, conditionals, answer validation, and basic calculations were used together to create the final Quiz Game.

4.2 Organization / Program Profile

The internship presentation identifies the program as the “Free Summer Internship in Python – 2026” by upSkillCampus. The completion certificate states that the program was conducted in collaboration with UniConverge Technologies and references the All India Council for Technical Education (AICTE).

The internship provided structured learning and practical exposure in Python programming. Its emphasis was on strengthening programming fundamentals and applying those fundamentals through a project. The program also included an assessment and revision component, along with introductory exposure to NumPy and Pandas concepts.

4.3 Problem Statement

Learning Python syntax and individual programming concepts is different from applying those concepts in a complete program. A learner may understand statements such as if-else, loops, lists, and dictionaries separately, but still need practical experience in combining them into a logical application.

The internship addressed this learning gap by developing a console-based Quiz Game. The problem was to organize question data, display questions and A/B/C/D options, receive and validate user answers, compare them with stored correct answers, maintain the score, calculate the final percentage, and classify the performance.

4.4 Project Objectives

- Strengthen understanding of Python fundamentals and programming logic.
- Apply if, if-else, and if-elif-else statements to program decisions.
- Organize quiz questions, options, and correct answers using Python data structures.
- Create a clear question → answer → feedback flow.
- Track the number of correct answers and calculate score and percentage.
- Display simple performance categories based on the final percentage.
- Gain practical experience in completing and submitting a console-based Python project.
- Use GitHub as a repository and submission platform for the project.

4.5 Scope of the Project

The scope of the Quiz Game is intentionally focused on a simple console-based Python application. The project covers multiple-choice questions with four options represented as A, B, C, and D. It accepts the user's answer, validates it against the stored answer, tracks the score, calculates a percentage, and presents a final performance result.

The project can serve as a foundation for future improvements such as adding a larger question bank, randomizing questions, introducing difficulty levels, adding a graphical user interface, storing results, or connecting the application to a database. These extensions are outside the demonstrated scope of the internship project.

4.6 Technologies and Tools Used

- Python – core programming language used to implement the Quiz Game.
- Visual Studio Code (VS Code) – development environment used to write and manage the Python code.
- Lists and Dictionaries – data structures used to organize questions, options, and correct answers.

- Loops – used to iterate through questions and quiz items.
- Conditional Statements – used for answer checking and performance classification.
- GitHub – repository used to store and submit the project.
- NumPy and Pandas – introductory library concepts explored during the internship for basic data-handling exposure.

4.7 SYSTEM ARCHITECTURE

The system follows a simple sequential architecture in which stored question data is processed through a quiz loop, user input is collected and checked, and the final score is converted into a percentage and performance category.

Stage	Component	Function
1	Question Data	Stores questions, A/B/C/D options, and the correct answer.
2	Quiz Loop	Displays each question and its available options.
3	User Input	Reads the user's A/B/C/D response and converts it to uppercase.
4	Answer Check	Compares the user answer with the stored correct answer.
5	Score Calculation	Increases the score for correct answers and calculates the percentage.
6	Performance Output	Displays the final score and performance category.

Figure 4.1: Logical flow of the Quiz Game system.

4.8 Methodology

The internship followed a four-week learning and development journey. Each stage contributed to the development and understanding of the final project.

Week 1 – Python Basics

The first week focused on understanding the internship activities, Python fundamentals, and selecting the Quiz Game as the practical project. The emphasis was on building a foundation for later programming tasks.

Week 2 – Conditional Logic

The second week focused on if/else structures and conditional thinking. These concepts were directly relevant to checking quiz answers, making program decisions, and controlling the quiz flow.

Week 3 – Python Libraries

The third week introduced NumPy and Pandas concepts and explored basic data-handling ideas. Although the Quiz Game itself remained a focused console application, this exposure broadened the understanding of Python's ecosystem.

Week 4 – Assessment and Revision

The fourth week involved completion of the Python assessment test and revision of previously learned concepts. Revision helped consolidate Python fundamentals and their practical application.

Implementation Flow

- Prepare the question set with question text, four options, and the correct answer.
- Iterate through each question using a loop.
- Display the question and options to the user.
- Read the user's A/B/C/D input and normalize it to uppercase.
- Compare the input with the stored correct answer.
- Increase the score when the answer is correct.
- Calculate the final percentage after all questions are completed.
- Use conditional logic to display a performance category and final result.

4.9 Expected Outcomes

- Better understanding of Python fundamentals and conditional statements.
- Ability to organize quiz data using lists and dictionaries.
- Practical experience with loops, user input, and answer validation.
- Ability to calculate score and percentage programmatically.
- Understanding of simple performance classification using if-elif-else.
- Experience developing a complete console-based Python project.
- Exposure to GitHub as a project repository and submission platform.

4.10 Project Completion and Certificate Proof

The Quiz Game project was successfully completed as part of the four-week internship. The internship presentation records a project duration of 04 August 2026 to 02 September

2026 and identifies the final Quiz Game as containing five multiple-choice questions with A/B/C/D options, score tracking, percentage calculation, and performance feedback.

The internship completion certificate confirms successful completion of the internship program in the Python domain for the same period. It identifies Certificate ID USC704178TIA and acknowledges Aditya Agarwal as the candidate.

Internship Offer Letter

Date: **23-08-2026**

Name: **Aditya Agarwal**

Email: **aditya.agarwal.cs28@iilm.edu**

Location: **Remote**

Dear **Aditya Agarwal**,

We are pleased to inform you that **Upskill Campus** alongwith its industry Partner **UniConverge Technologies Pvt. Ltd.** has agreed to provide you internship as **Python Intern**
Your appointment of service is based on the following terms and conditions.

1. The internship shall start from **23-08-2026**
2. **Internship:** The internship period will be 4 to 6 weeks, starting from the date of joining.
3. **Working Hours:** The internship runs from 10:00 AM to 6:00 PM.

On behalf of both the Company, we wish you every success in your position and trust that our relationship will be long and mutually rewarding.

Sincerely

For Upskill Campus and UniConverge Technologies Pvt. Ltd.

Prabha Singh
HR Manager

5. CONCLUSION

The Python internship provided a practical opportunity to strengthen programming fundamentals and apply them in a complete working application. The Quiz Game project helped connect concepts such as lists, dictionaries, loops, conditional statements, user input, answer validation, and score calculation into one logical program.

The four-week journey also provided exposure to Python libraries such as NumPy and Pandas and introduced the use of GitHub as a project repository and submission platform. The experience demonstrated the importance of moving beyond theoretical syntax toward practical problem solving and structured program development.

Overall, the internship contributed to a stronger foundation in Python programming and provided useful hands-on experience in developing, testing, and presenting a small software project.
